While the capacity of low-income Connecticut households to pay their home energy bills improved in 2010, the federal energy assistance program designed to help pay those bills still fell far short in its ability to stem the tide of home energy unaffordability. The discussion below reviews the Home Energy Affordability Gap in Connecticut in 2010. The data and analysis leads to the following conclusions:

- The Home Energy Affordability Gap in Connecticut, which represents the dollar amount by which actual home energy bills exceed affordable home energy bills, is substantial; is statewide, affecting both urban and rural areas of the state; and is increasingly affecting households that have traditionally been considered moderate income.
- The federal fuel assistance program, known as the Low-Income Home Energy Assistance Program (LIHEAP), covers a fraction of the home energy costs for a fraction of the income eligible population.
- Low-income households do not have the discretionary income to absorb energy bills that are not offset by public or private assistance programs;
- The increasing unaffordability of home energy places other non-energy household necessities at risk, including most notably the affordability of overall shelter costs.

Each of these conclusions is considered in more detail below.

## **THE HOME ENERGY AFFORDABILITY GAP IN CONNECTICUT**

The State of Connecticut has a large Home Energy Affordability Gap facing its low-income households, with available resources grossly insufficient to address the problem. As a result of this mismatch between energy bills and the resources needed to pay them, many low-income households incur unpaid bills and experience the termination of service associated with those arrears. In addition, the paid-but-unaffordable bill is a real phenomenon in Connecticut. Even when low-income households pay their bills in a full and timely manner, they often suffer significant adverse hunger, education, employment, health and housing consequences in order to make such payments.

Energy prices have placed a substantial burden on the public and private energy assistance agencies in Connecticut. Current home heating, cooling and electric bills in Connecticut have driven the average *per-household* Home Energy Affordability Gap for households living with incomes at or below 185% of the Federal Poverty Level (FPL) to crushing levels. The average annual shortfall between actual and affordable home energy bills for households at or below 185% of FPL now reaches nearly \$2,100 per household. The aggregate Home Energy Affordability Gap in Connecticut now reaches more than \$480 million statewide.

This \$480 million is *not* the total low-income home energy bill in Connecticut. Rather, the \$480 million is the Affordability Gap, the dollar amount by which actual home energy bills exceed affordable home energy bills.

The Affordability Gap differs by geographic region within the state. The aggregate Home Energy Affordability Gap will differ by factors that include the heating degree days (HDDs) and cooling degree days (CDDs); the number of low-income households and the poverty level at which those households live; the type and size of housing unit; the mix of heating fuels (e.g., natural gas, electricity, fuel oil); and other similar factors.

The appendices attached to this report present Connecticut’s annual Home Energy Affordability Gap from three perspectives:

- Appendix A presents the Home Energy Affordability Gap for each state legislative district (House) in Connecticut;
- Appendix B presents the Home Energy Affordability Gap for each state legislative district (Senate) in Connecticut; and
- Appendix C presents the Home Energy Affordability Gap for each Congressional district in Connecticut.

In contrast to these detailed statistics, the narrative discussion below highlights different aspects of the Home Energy Affordability Gap. The detailed statistics for each legislative district, however, can be obtained from the relevant appendices.

While the Home Energy Affordability Gap varies somewhat based on geography within the state of Connecticut, there can be no question but that the Affordability Gap is a statewide phenomenon. This fact can be seen by comparing the aggregate Affordability Gap in each Congressional District in Connecticut. The annual statewide Affordability Gap of \$480 million is split nearly evenly over each of Connecticut’s Congressional districts. While the distribution of the Affordability Gap is not identical over Connecticut’s Congressional districts, it ranges from a low of 18% in the Fourth District to a high of 22% in the Third District. Congressional District #4, with the *smallest* Affordability Gap in Connecticut, nonetheless faces a Gap of more than \$85 million.

**Total Home Energy Affordability Gap by Congressional District  
(Connecticut 2010)**

Congressional District	Congressional Representative	Aggregate Shortfall	Percentage of Statewide Shortfall
1 <sup>st</sup> District	Rep. John B. Larson	\$103,127,468	21%
2 <sup>nd</sup> District	Rep. Joseph Courtney	\$93,581,674	19%
3 <sup>rd</sup> District	Rep. Rosa L. DeLauro	\$103,888,324	22%
4 <sup>th</sup> District	Rep. James A. Himes	\$ 85,439,159	18%
5 <sup>th</sup> District	Rep. Christopher S. Murphy	\$ 94,018,994	20%
State Total		\$480,055,619	100%

The statewide nature of Connecticut’s Home Energy Affordability Gap can be seen in the state legislative districts as well. There are clearly some House legislative districts, for example, that

have a particularly large aggregate Affordability Gap. Districts such as House District #002, #009, #019, #082, #086, #117 and #147 all have an Affordability Gap that is more than \$4.8 million. This is not surprising, since these districts have some of the most populated districts in the state.

The Connecticut Home Energy Affordability Gap, however, is not exclusively the province of these populated regions. Six House Districts have 1,000 or fewer low-income households, but have an aggregate Home Energy Affordability Gap of roughly \$2.0 million or more (Districts #081 (\$2.1 million); #113 (\$1.94 million); #121 (\$2.1 million); #128 (\$2.0 million); #137 (\$2.1 million); #150 (\$2.1 million)).

### **HOME ENERGY AFFORDABILITY GAP REACHES INTO MODERATE INCOME**

The *total* Home Energy Affordability Gap (for all households) is not the only concern presented in Connecticut. One additional cause for particular concern is the fact that the Affordability Gap is reaching increasingly into what historically has been seen to be more moderate income households. Home energy burdens (bills as a percentage of income)<sup>1</sup> now exceed the affordable level for households with income between 150% and 185% of the Federal Poverty Level in *every* Connecticut state House legislative district. In fourteen House Districts, the home energy burdens exceed twice the affordable level. The remainder fall between roughly 11% and 12%.

These burdens for households with income between 150% and 185% of Federal Poverty Level, the highest income level studied, are significant because the home energy burden increases as household incomes decrease. Home energy burdens for households at lower Poverty levels will be substantially greater than twice the affordable level.

The Table below documents the growth in Connecticut's Home Energy Affordability Gap since 2003. Note that while the dollar growth in the total Home Energy Affordability Gap is not substantially higher in the top two income tiers (125-149% and 150-185% of Federal Poverty Level), the *percentage* growth in the top two tiers is much higher. The reason is that increasing energy prices have pushed households at these income levels into the "unaffordable" range. While in the past, home energy bills to these households would have been affordable, and thus not contributed to the Home Energy Affordability Gap, at current prices, they *are* unaffordable and thus contribute to the Gap in a substantial way.

---

<sup>1</sup> A "home energy burden" is simply the ratio of the home energy bill to gross household income. A household with an annual income of \$8,000 and a total home energy bill of \$2,000, for example, has a home energy burden of 25% ( $\$2,000 / \$8,000 = 0.25$ ).

---

**Increase in Home Energy Affordability Gap by Federal Poverty Level  
2003 to Present (Connecticut)**

---

	Aggregate Affordability Gap by Ratio of Income to Federal Poverty Level					
	Below 50%	50 - 74%	75 - 99%	100 - 124%	125 – 149%	150 - 185%
2003 annual /a/	\$89,625,061	\$35,306,332	\$34,515,064	\$33,713,227	\$30,208,168	\$31,157,758
2010 legislative /b/	\$143,493,896	\$60,716,321	\$62,645,542	\$66,011,593	\$65,478,618	\$81,709,649
Growth in Affordability Gap	\$53,868,835	\$25,409,989	\$28,130,478	\$32,298,366	\$35,270,450	\$50,551,891
Percentage growth	60%	72%	82%	96%	117%	162%

NOTES:

/a/ The annual 2003 Home Energy Affordability Gap was released in April 2004.

/b/ The 2010 legislative Home Energy Affordability Gap analysis was performed in December 2010.

---

This growth in the Affordability Gap in the more moderate income ranges has significant policy ramifications for fuel assistance funding. As the Home Energy Affordability Gap expands “upwards” (to more moderate income households), the need to provide assistance expands “upwards” as well. The significance of this is two-fold:

First, if funding remains constant, when the number of households that must be served increases, fewer dollars are available on a per-household basis. This is true even though the per-household Affordability Gap in Connecticut has increased significantly since the base year (2003).

Second, the number of households in each range of Federal Poverty Level is not equal. Indeed, the number of households in each Poverty Level range increases as incomes increase. The Table below presents the number of Connecticut households in each range of Poverty Level as of the 2000 Census. There are:

- more households in the 75 – 99% range of Federal Poverty Level than in the 50 – 74% range;
- more in the 100 – 124% range than in the 75 – 99% range;
- more in the 125 - 149% range than in the 100 – 124% range; and
- more in the 150 – 185% range than in the 124 – 150% range.<sup>2</sup>

As the need for energy assistance expands into higher income households, in other words, there is a need to provide proportionately more energy assistance simply to remain even.

---

<sup>2</sup> While the last range is somewhat wider (35% rather than the 25% increments of previous ranges), there are nonetheless proportionately more households in the final range even taking into account this wider spread.

---

### Poverty Households in Connecticut (2000 Census)

---

Poverty Level	No. of Households
Below 50%	50,652
50 – 74%	24,654
75 – 99%	28,261
100 – 124%	33,339
125 – 149%	37,727
150% - 185%	56,550

---

### HOME ENERGY BURDENS

The affordability of energy bills is measured by what is called a household’s “energy burden.” Energy burdens are simply the household energy bill as a percent of household income. If a household has a \$10,000 annual income and a \$1,000 home energy bill, for example, that household has an “energy burden” of 10%. The energy burdens of low-income Connecticut households show the problem that the public and private energy assistance programs are designed to address.

Energy burdens can be used to compute the Home Energy Affordability Gap for various geographic areas. The Affordability Gap is the dollar amount by which *actual* low-income home energy bills exceed *affordable* home energy bills, as measured by an affordable home energy burden.

Home energy is a crippling financial burden for low-income Connecticut households. Connecticut households with incomes of below 50% of the Federal Poverty Level pay roughly 70% (or more) of their annual income for their home energy bill in every Connecticut House district. Households living between 50% and 100% of the Federal Poverty Level pay, on average, between one-fifth and one-third of their annual income for their home energy bills.

The Table below presents Connecticut home energy burdens disaggregated by Federal Poverty Level for the years 2005 through 2010. Home energy burdens in Connecticut have not reached the levels experienced in 2007, when the state experienced dual spikes in prices for both natural gas and fuel oil,. Indeed, the 2010 burdens moderated from 2009, due to dips in fuel prices and

somewhat higher incomes. Connecticut’s home energy burdens, however, continue to substantially exceed those burdens experienced as recently as 2005.

State Aggregate Home Energy Burdens by Ratio of Income to Federal Poverty Level and Year (Connecticut)						
Ratio of income to Federal Poverty Level	2005 /a/	2006 /a/	2007 /a/	2008 /a/	2009 /a/	2010 /b/
Below 50%	62.0%	74.4%	99.7%	84.6%	86.2%	75.1%
50 – 74%	24.8%	29.8%	39.9%	33.9%	34.5%	30.0%
75 – 99%	17.7%	21.3%	28.5%	24.2%	24.6%	21.5%
100 – 124%	13.8%	16.6%	22.2%	18.9%	19.2%	16.7%
125-149%	11.3%	13.5%	18.2%	15.5%	15.7%	13.7%
150 – 185%	9.3%	Distri5.0%	15.0%	12.7%	12.9%	11.3%

NOTES:

/a/ Annual Home Energy Burdens for Connecticut taken from annual Home Energy Affordability Gap published in April/May each year since 2003.

/b/ 2010 Home Energy Burden calculated for this special legislative Affordability Gap study (Connecticut).

The trend in energy affordability in Connecticut over the years 2005 through 2010 is clear. While there was a dip in home energy burdens in 2010 relative to 2009, home energy burdens are 25% higher in 2010 than they were in 2005, even after taking into account increases in income.

**FEDERAL LIHEAP COVERAGE**

Much of the burden for the Home Energy Affordability Gap facing Connecticut will fall on the private sector (should resources be there to address the problem). Funding for the federal Low-Income Home Energy Assistance Program (LIHEAP) has historically been grossly insufficient to meet the Affordability Gap, and is decreasing in its ability keep up with increasing energy prices.

A common misperception is that the dramatic increase in LIHEAP funding in Fiscal Year 2009 placed low-income households in much better position than they had experienced in previous years. In fact, however, the increase in 2009 LIHEAP funding just barely returns Connecticut households to the inadequate position they had experienced in 2002. The Table below presents the data. While LIHEAP covered 17.5% of the Home Energy Affordability Gap in 2002, providing \$35 million of energy assistance against an Affordability Gap of \$200 million, even with increased funding, LIHEAP covered only 20% of the Home Energy Affordability Gap in 2010, providing \$96 million against an Affordability Gap of \$480 million.

---

## LIHEAP and Connecticut's Home Energy Affordability Gap /a/

Affordability Gap Year	Total Home Energy Affordability Gap <sup>3</sup>	Regular Block Grant LIHEAP Allocation	LIHEAP Coverage Ratio
2002 <sup>4</sup>	\$200,793,319	\$35,045,798	17.5%
2010 <sup>5</sup>	\$480,035,619	\$96,941,803	20.2%
Increase	\$279,242,300	\$61,896,005	---

---

Even this “LIHEAP coverage ratio” overstates the effectiveness of LIHEAP in keeping up with increasing home energy bills. The LIHEAP Coverage Ratios in 2002 and 2010 (17.5% and 20.2% respectively) might be construed to indicate that LIHEAP has maintained the Affordability Gap somewhat constant. Such a conclusion would be wrong.

In fact, as the Table above shows, while the LIHEAP Coverage Ratio has somewhat increased relative to the Coverage Ratio in 2002 on a percentage basis, the *dollar level* of the Affordability Gap not covered by LIHEAP has dramatically increased. While the Connecticut Home Energy Affordability Gap increased by nearly \$280 million from 2002 to 2010, the LIHEAP allocation to Connecticut increased by only \$62 million. From 2002 to 2010, in other words, Connecticut's low-income households experienced an increased Affordability Gap of nearly \$220 million not offset by increased LIHEAP allocations.

LIHEAP continues to be severely inadequate in Connecticut. LIHEAP covers a fraction of the Home Energy Affordability Gap for a fraction of income-eligible households.

### **BASIC FAMILY NEEDS BUDGETS**

The failure of federal fuel assistance to provide assistance that is sufficient to adequately respond to increases in home energy prices, coupled with small, or even negative, changes in household income for households receiving public assistance, leaves low-income Connecticut households vulnerable to the inability to provide basic household necessities such as food, clothing, energy and shelter.

Low-income households have insufficient income to increase their expenditures on home energy without compromising other basic household necessities. This inability can be seen through a comparison of household income to a Basic Family Needs Budget.

A Basic Family Needs Budget takes into account the entire range of household expenses, including housing, food, childcare, transportation, health care, necessities and taxes. To the extent that household income is insufficient to cover these basic expenditures, trade-offs must occur in what gets paid and what does not. A Basic Family Needs Budget varies based on both

---

<sup>3</sup> The total Home Energy Affordability Gap includes electricity and hot water usage.

<sup>4</sup> The annual Home Energy Affordability Gap looks at the immediately preceding year (so that actual prices as reported by DOE can be used). Accordingly, the 2002 Home Energy Affordability Gap was released in April 2003.

<sup>5</sup> The 2010 Home Energy Affordability Gap was prepared through a special study dated January 2011.

household size and household composition. Not only will a three-person family have a different budget than a two-person family, but a one-parent/two-child three-person family will have a different Basic Family Needs Budget than a two-parent/one-child three-person family.

The Table below shows the inadequacy of household incomes in Connecticut. Basic Family Needs Budgets<sup>6</sup> for four different family configurations were calculated, using different family composition and family size. Within Connecticut's metropolitan areas, the Basic Family Needs Budget for a one-parent/one-child family ranged from a low of 267% of the Federal Poverty Level (Waterbury) to a high of 384% of the Poverty Level (Stamford-Norwalk). Connecticut's rural areas had a somewhat lower Basic Family Needs Budget (267% of Poverty Level).

The Basic Family Needs Budgets of one-parent/two-child families were clustered more closely within the state, generally staying between 270% and 310% of Federal Poverty Level. A two-parent/one-child family has a somewhat higher Basic Family Needs Budget in Connecticut than a one-parent/two-child family, being generally, but not exclusively, clustered between 240% and 280% of Federal Poverty Level. Both the Danbury and the Stamford/Norwalk metro regions have a higher cost of living.

Finally, while the absolute dollar amounts of the Basic Family Needs Budget for a two-parent/two-child family are higher than the corresponding budgets for smaller families, the ratio of those incomes to the Federal Poverty Level are not significantly different. Families with income at 251% of Poverty Level in Waterbury, along with families at 257% of the Poverty Level in Norwich/New London, and 262% of Poverty Level in Hartford/West Hartford/East Hartford, are living with an income that would cover the Basic Family Needs Budget for a 2-parent/2-child family. In contrast, it would require an income of 277% of Poverty Level in Bridgeport, and 281% of Poverty Level in New Haven/Meriden to cover the Basic Family Needs Budget for a 2-parent/2-child family.

---

<sup>6</sup> Unless the context otherwise clearly shows, a "family" and a "household" are considered to be synonymous for purposes of this discussion.

**Basic Family Needs Budget in Dollars and Percentage of Federal Poverty Level  
by Geographic Area (2008) (Connecticut)**

	1 parent/1 child		1 parent/2 children		2 parents/1 child		2 parents/2 children	
	Dollars	FPL /a/	Dollars	FPL	Dollars	FPL	Dollars	FPL

Waterbury	\$37,419	267%	\$48,435	275%	\$42,857	244%	\$53,173	251%
Rural	\$37,330	267%	\$44,168	251%	\$43,069	245%	\$49,290	233%

**NOTES:**

/a/ FPL is the ratio of the basic family budget to 100% of the Federal Poverty Level for the particular household size. 100% of Federal Poverty Level in 2008 for a two-person household was \$14,000; for a three-person household was \$17,600; and for a four-person household was \$21,200. The most recent Basic Family Needs Budget data available is for 2008.

**SOURCE:** Economic Policy Institute, Basic Family Needs Budget Calculator.

The conclusions to be drawn from this data, *vis a vis* home energy unaffordability, are two-fold. First, Connecticut’s low-income households do not have discretionary income that they can devote to paying increased home energy burdens. Without additional home energy assistance, if energy bills increase, whether attributable to increasing prices, severe weather, or some other cause, either those bills will remain unpaid or Connecticut’s households will be called upon to make additional compromises in the provision of other household necessities.

Second, whether low-income energy bills get paid in a full and timely fashion is not a function of adequate (or appropriate) “budgeting” on the part of the household. No matter how well budgeted, for example, it is not possible for a low-income Connecticut household to stretch an income at 200% of Federal Poverty Level to pay increased home energy bills when the Basic Family Needs Budget reaches between 250% and 350% of the Federal Poverty Level.

**WHAT CONTRIBUTES TO THE INABILITY TO MEET BASIC NEEDS BUDGET**

The inability of low-income Connecticut households to meet these Basic Family Needs Budgets comes as no surprise. The discussion below considers the ongoing deterioration in median income and wages in Connecticut relative to what it takes to fund a basic standard of living.

### ***Overall Median Income***

The Table below presents data on the median income of households by the ratio of income to Federal Poverty Level. The data reported is for the years 2006 through 2009; 2010 median income data is not yet available. The median income is based on the mid-point of each range. For example, in 2005, half of all households with income below 50% of the Federal Poverty Level had income above \$5,000 while half had income below that dollar level. In 2007, half of all households with income more than 100% but less than 125% of Federal Poverty Level had income of more than \$19,816 while half had income less than that dollar amount.

	Below 50%	50 – < 75%	75 – < 100%	100 – < 125%	125 – < 150%	150 – < 200%	200 – < 250%	250% and Above
2006	\$5,000	\$11,000	\$15,400	\$18,000	\$24,800	\$29,200	\$38,188	\$91,266
2007	\$4,800	\$9,840	\$15,782	\$19,816	\$26,650	\$30,574	\$41,608	\$98,600
2008	\$5,720	\$12,006	\$16,696	\$17,500	\$29,900	\$30,000	\$45,000	\$103,000
2009	\$6,360	\$10,500	\$17,000	\$23,800	\$25,000	\$34,028	\$41,000	\$105,566

Current Population Survey Table Creator for the Annual Social and Economic Supplement (annual).

The observation that stands out from the data on median income disaggregated by Federal Poverty Level is that the median income of households below 250% of Federal Poverty Level is inadequate to meet Connecticut’s Basic Family Needs Budgets. These households consistently experience an absolute mismatch between household expenditures on basic needs and the income available to pay those expenses.

### ***The Particular Needs of the Working Poor***

The inability to meet basic needs in Connecticut is no longer the province of households traditionally considered to be low-income. The increasing movement of home energy unaffordability into the middle class is reflective of the growing mismatch between working incomes and the income a household requires to meet its basic family needs. The most recent Basic Family Needs Budget for various geographic regions in Connecticut was presented above.

The Table below presents the average wage and salary per job as reported by the U.S. Department of Commerce for various regions throughout Connecticut. As can be seen, with the exception of Fairfield, the average wage per job is inadequate to cover a Basic Family Needs Budget in Connecticut. Virtually across-the-board, a working household with a single income would not be able to provide adequately for basic household needs such as housing, food, energy and clothing.

**Average Wage and Salary per Job  
by Geographic Area (2008) (Connecticut)**

	2006	2007	2008	Growth	
				Actual (%)	If at Inflation
Connecticut (state total)	\$54,012	\$57,123	\$57,453	6.4%	\$58,621
Connecticut (metropolitan portion)	\$55,102	\$58,353	\$58,662	6.5%	\$59,804
Connecticut (non-metropolitan portion)	\$37,514	\$38,426	\$39,118	4.3%	\$40,715
Fairfield	\$73,637	\$78,638	\$78,222	6.2%	\$79,921

SOURCE: Bureau of Economic Analysis, Regional Economic Accounts, U.S. Department of Commerce.

Moreover, as the Table above shows, only in Tolland did the growth in wages keep pace with inflation in Connecticut. In each of the other geographic areas reported above, the actual 2008 average wage per job was lower than it would have been had the 2006 average wage been escalated at the rate of inflation.

The recession that hit the entire United States did not spare the state of Connecticut. According to one annual analysis,<sup>7</sup> between March 2008 and December 2009, Connecticut would lose 103,400 jobs, a rate of close to 5,000 jobs per month. The report notes that while the state has been adding jobs back since that time, “at the present rate of job growth since last December [2009--ms], it would take almost four and a half years to return to the level of jobs that existed before the recession began.”

The loss of jobs in Connecticut hit the middle-class the hardest. According to the State of Working Connecticut, “job losses were particularly acute among the middle fifth of Connecticut occupations by wage. . . while workers in the middle fifth of occupations faced the greatest net job losses, lower wage workers did not fare much better.” The Table below summarizes job losses by quintile of income.

<sup>7</sup> Joachim Heron, et al. (September 2010). State of Working Connecticut, 2010, Connecticut Voices for Children: New Haven (CT) (annual publication).

### Summary of Job Loss in Connecticut (2006 – 2009)

	Highest Fifth	Fourth Fifth	Middle Fifth	Second Fifth	Lowest Fifth
Examples of Occupations	Dentists, lawyers, registered nurses	Accountants, Sales reps, electricians	Carpenters, truck drivers, bookkeepers	Customer service reps, office clerks, medical assistants	Food prep workers, janitors, home health aides
Median hourly wage	>\$31.56	\$31.56 – 24.19	\$24.19 – 18.52	\$18.52 - \$14.47	<\$14.47
Net changes in jobs (May '06 – May '09)	+13,450 jobs	-3,200 jobs	-14,020 jobs	-8,970 jobs	-8,430 jobs
Percent change in jobs (May '06 – May '09)	+5.6%	-1.5%	-6.8%	-3.4%	-1.9%

### IMPACT OF ENERGY PRICES ON TOTAL SHELTER COSTS

Housing affordability has a direct impact on the ability of Connecticut’s low-income households to be able to afford their home energy bills. As housing prices increase, low-income households are increasingly forced out of higher-quality, higher-priced homes into older, lower-quality, less-energy efficient homes.

While the affordability of housing prices has remained relatively constant for two-bedroom units in 2010 relative to 2006 in most, but not all, areas of Connecticut, overall housing remained unaffordable. Only in Bridgeport did renters need to have income at a higher ratio of income to Federal Poverty Level to afford a two-bedroom unit in 2010 than they needed in 2006.

Nonetheless, as the Table below shows, throughout the state, between 45% and 60% of all renters (at all income levels) could not afford a two-bedroom unit. In Bridgeport, Danbury, New Haven/Meriden, Stamford/Norwalk and Waterbury, 55% or more of *all* renters (not merely low-income renters) could not afford a two-bedroom unit. Even in the regions of the state with the *most* affordable shelter costs (Colchester/Lebanon, Milford/Ansonia/Seymour, Norwich/New London, Southern Middlesex County, Litchfield County and non-metropolitan areas), between 45% and 50% of all renters could not afford a two-bedroom unit.

The unaffordability of housing is particularly acute for Connecticut’s low-income households. In 2010, the minimum income required to rent a two-bedroom unit (for a two-person household) in Connecticut ranged from a low of 188% of the Federal Poverty Level (Windham County) to a high of 305% (Danbury) and 384% of Poverty Level (Stamford/Norwalk).

Shelter Affordability by Selected Metropolitan Areas (2006 & 2010)  
(Connecticut)

	Renters Unable to Afford 2-BR Unit (2010)	Income Need to Afford 2-Bedroom Unit (2010) /a/ /b/		Income Needed to Afford 2-Bedroom Unit (2006) /a/ /b/	
		Dollars	Pct FPL	Dollars	Pct FPL
Bridgeport	60%	\$51,320	280%	\$40,960	247%
Colchester-Lebanon	44%	\$45,560	249%	\$41,720	251%
Danbury	57%	\$63,640	348%	\$50,680	305%
Hartford-West Hartford-East Hartford	53%	\$43,800	239%	\$41,160	248%
Milford-Ansonia-Seymour	47%	\$47,160	258%	\$41,680	251%
New Haven-Meriden	60%	\$47,240	258%	\$42,600	257%
Norwich-New London	47%	\$40,640	222%	\$34,280	207%

SOURCE: National Low-Income Housing Coalition, Out of Reach (annual)

NOTES:

/a/ Federal Poverty Level needed to rent 2 BR and 3 BR units calculated using NLIHC data.

/b/ The number of household members used in calculating Federal Poverty Level is equal to the number of bedrooms plus 1.

Energy costs and shelter costs march hand-in-hand in any discussion of “affordability.” The energy (and other utility) costs associated with housing are one component of the overall “rent” that is used to determine “housing affordability.” Fair Market Rents (FMRs), published annually by the U.S. Department of Housing and Urban Development (HUD) include all utility costs (except telephone). One aspect of the overall unaffordability of the rents presented above is the unaffordability of the underlying home utility costs.

Moreover, the unaffordability of shelter also impedes a lower-income household’s ability to respond to high energy costs. Not only do high shelter costs force low-income households into lower quality housing units, but they also divert resources that might otherwise be available to invest in cost-effective energy usage reduction measures. When households cannot afford to pay their basic shelter costs, they do not “invest” money in measures to save energy, even if those measures might generate even a moderate-term payback.

### HOUSEHOLD RESPONSES TO ENERGY UNAFFORDABILITY

The implications of the unaffordability of home energy in Connecticut are sobering. The unaffordability of energy manifests itself in more than simply unpaid bills. According to the

National Energy Assistance (NEA) survey published by the National Energy Assistance Directors Association (NEADA),<sup>8</sup> despite significant residential energy expenses, most low-income households pay their energy bills regularly; the NEADA study documents “the choices that low-income households make when faced with unaffordable energy bills.” The survey found that LIHEAP recipients faced life-threatening challenges.

- 12% of the national respondents had their natural gas or electricity service disconnected because of an inability to pay.
- 35% received a notice or threat to disconnect or discontinue their home heating service.
- 41% went without medical or dental care in order to have money to pay their home energy bill;
- 33% went without filling a prescription or taking the full dose of a prescribed medicine.
- 30% went without food for at least one day.

NEADA reported that all of these problems had significantly increased since the first national energy assistance survey in 2003.

Low-income customers frequently have little incentive, and even fewer choices, to pursue constructive responses to their energy poverty. Enrolling in an energy efficiency program to reduce high bills on a going-forward basis, for example, does not help pay an existing arrearage unless coupled with a reasonable long-term deferred payment plan. Conversely, agreeing to a deferred payment arrangement does not address affordability on a going-forward basis unless some adjustment can be made that either affects the level of the current bill or the level of household resources available to pay the current bill going forward.

All too frequently, the customer is faced with an immediate need (*e.g.*, bill payment by a date certain) with the available constructive responses to an inability-to-pay unable to deliver assistance either in the form, the time period, or the magnitude necessary to meet that need.

In this era of tight budgets and financial cutbacks for social services programs, it may seem unrealistic to recommend that society direct increased funding to help alleviate a poverty-related need. Nonetheless, it would be irresponsible to fail to acknowledge that the primary means to address the unaffordability of low-income home energy bills involves money.

## **INCREASING FUNDING FOR BILL PAYMENT ASSISTANCE PROGRAMS**

Funding for bill payment assistance programs may come from three major sources:

- The federal government, through the Low-Income Home Energy Assistance Program (LIHEAP);
- The state government, through utility-funded universal service or public benefits programs; and
- The private sector, through private charitable crisis-intervention funds, known as fuel funds.

Each will be separately discussed below.

### ***Funding for LIHEAP***

The full nationwide Home Energy Affordability Gap was calculated to reach nearly \$39.6 billion in 2009.<sup>9</sup> Clearly, additional funding for LIHEAP would reduce the energy burdens experienced by low-income households. But how much would our nation need to spend to provide sufficient funding to serve all low-income households in need? “A definition of full funding,” one research organization has said, “depends on defining the level of assistance to individual families which is adequate, effective, and/or appropriate. The cost of meeting that level, or a defined share of it, for a target population will allow a determination of the resources needed in LIHEAP.”<sup>10</sup> The need should be determined by what funding it takes to reduce energy burdens, as a percentage of income, to an affordable level.<sup>11</sup>

### ***State Public Benefits Programs***

One of the most effective low-income fuel assistance program structures outside LIHEAP involves the delivery of rate affordability assistance through public utilities. While clearly not all low-income households use utility fuels such as natural gas and electricity as their primary heating source, nonetheless, the existence of electricity is nearly universal and the combination of gas and electric heating covers a substantial proportion of low-income households in Connecticut. A variety of program designs, target populations, and justifications exist for the utility programs that operate around the nation. The experience from these programs merits their emulation in Connecticut.<sup>12</sup>

---

<sup>9</sup> The annual Home Energy Affordability Gap data, for the nation as a whole, for individual states, and for specific Census divisions, can be obtained on-line at [www.HomeEnergyAffordabilityGap.com](http://www.HomeEnergyAffordabilityGap.com). The 2009 Home Energy Affordability Gap was released in May 2010. The annual Home Energy Affordability Gap for 2010 will be released in the Spring of 2011.

<sup>10</sup> Persons interested in the most recent efforts to achieve full funding for LIHEAP can access information at the World Wide Web site of the Campaign for Home Energy Assistance: <http://www.LIHEAP.org>.

<sup>11</sup> Economic Opportunity Studies (February 2001). “Full Funding for LIHEAP: What is it?”, Economic Opportunity Studies: Washington D.C.

<sup>12</sup> A comprehensive multi-state, multi-sponsor review of ratepayer-funded home energy affordability programs can be obtained at [www.appriseinc.org](http://www.appriseinc.org) (click on “multi-sponsor study—July 2007”).

The Pennsylvania Customer Assistance Program (CAP) represents an exemplary comprehensive statewide effort on the part of utilities to address the payment problems of their low-income households. Under the 1990 Pennsylvania Public Utility Commission (PUC) order directing the establishment of CAPs by both electric and gas utilities, affordable rate programs were to be directed toward income-eligible payment-troubled customers.

The Pennsylvania CAP programs were directed to be implemented by a 1992 Pennsylvania Public Utility Commission order. That order, titled *Policy Statement on Customer Assistance Programs (CAP)*,<sup>13</sup> found that "CAPs provide alternatives to traditional collection methods for low-income, payment troubled customers. Generally, customers enrolled in a CAP agree to make monthly payments based on household family size and gross income. These regular monthly payments, which may be for an amount that is less than the current bill, are made in exchange for continued provision of utility service." The PUC concluded: "as a result of our investigation, the Commission believes that an appropriately designed and well implemented CAP, as an integrated part of a company's rate structure, is in the public interest. These guidelines prescribe a model CAP which is designed to be a more cost effective approach for dealing with issues of customer inability to pay than are traditional collection methods."

Other state universal service programs include:

- New Hampshire's Electric Assistance Program (EAP), operating as a "tiered discount" program;
- New Jersey's Universal Service Fund (USF), operating as a "fixed credit" program;
- Maryland's Electric Universal Service Program (EUSP), operating as a LIHEAP supplement program; and
- Indiana's Universal service Programs (USPs), operating as a tiered rate discount program.

A variety of other states (Ohio, Illinois, Wisconsin, Colorado, Oregon, California) also operate public benefits programs that provide rate affordability assistance.<sup>14</sup>

---

<sup>13</sup> Docket M-00920345 (July 2, 1992).

<sup>14</sup> The National Consumer Law Center, in Boston, maintains an up-to-date list of public benefits programs. Because such a list is so constantly changing, one is not included in this publication. An analysis of "best practices" within ratepayer-funded rate affordability programs was recently prepared for Hydro-Quebec. Roger Colton (November 2007). *Best Practices: Low-Income Rate Affordability Programs: Articulating and Applying Rating Criteria*, Fisher, Sheehan & Colton: Belmont (MA).

## ***Fuel Fund Funding***

Connecticut fuel funds are among the most successful in the country. Operation Fuel is a nationally-recognized leader in the provision of charitable crisis energy assistance.

Public utilities should recognize the benefits of engaging in aggressive fundraising efforts to assist local fuel funds. Fuel funds are local agencies that provide charitable energy assistance, generally to prevent the disconnection of service for nonpayment. Aggressive fundraising can occur in at least the following ways:

Utilities can engage in direct outreach to their customers on a periodic basis. Many utilities provide fuel fund solicitation no fewer than four times a year, at least one of which is not a bill insert.

Utilities can seek to enroll customers in regular contribution programs rather than merely seek one-time contributions. Program enrollment involves customers agreeing to donate on a regular basis through a line-item on the bill. Once enrolled, the participation continues until the customer asks to be un-enrolled.

Utilities can solicit customers to donate refunds or other rebates provided by the utility. This refund might involve excess earnings sharing of a utility operating under an earnings cap, refunds of interim base rate increases collected under bond subject to refund, gas pipeline refunds, or other money directed back to the customer. Donations of rebates offered through energy efficiency programs, for example, as well as donations of customer capital distribution by Rural Electric Cooperatives (RECs) can be sought. The Colorado Energy Assistance Foundation (now Energy Outreach Colorado) found that because customers often view refunds as “found money,” the rate of customers contributing, as well as the level of giving per customer, are up to four times higher with such donations than with normal solicitations.

Utilities can adopt fuel fund contribution mechanisms to be used during on-line payment. As an increasing number of customers move to on-line payment of bills, the proportion of contributions decreases in the absence of a specific on-line contribution mechanism. A mandatory fuel fund contribution screen, requiring a person to make an affirmative choice about whether or not to contribute, is a useful mechanism.

Each utility company’s activities can be evaluated against other national utilities to determine whether its fuel fund solicitations are generating funds at a rate and level that is consistent with those of best practice utilities. Appropriate benchmarking includes fuel fund contributions on a dollars-per-customer basis as well as on a contribution-as-percent-of-residential-revenue basis. Where the utility company’s fuel fund contributions are shown through such an evaluation to have fallen short, the company should develop specific plans on how to modify its fuel fund solicitation process.<sup>15</sup>

---

<sup>15</sup> The primary source of information on fuel funds is the National Fuel Funds Network (NFFN). NFFN information can be accessed at its World Wide Web site: <http://www.nationalfuelfunds.org>.

### *Additional Actions not Considered*

Generating additional funding for bill assistance is certainly not the only needed energy assistance. Weatherization, for example, can be an effective tool to use in reducing low-income energy needs for many, but not all, households. Weatherization improves affordability by increasing the efficiency of energy usage and thus decreasing energy bills.

Like fuel assistance, however, weatherization has limitations to its effectiveness. It is inadequately funded. Federal Weatherization Assistance Program (WAP) dollars will never be adequate to provide services to all eligible low-income homes needing weatherization within a reasonable period of time.

It must be remembered that the Home Energy Affordability Gap study found that Connecticut has more than 50,000 households living with income below 50% of the Federal Poverty Level. An additional 25,000 live with incomes between 50% and 75% of Poverty, while 30,000 more live with incomes between 75% and 100% of Poverty. As can be seen, even limiting consideration to households below Poverty Level, even if WAP were to reach thousands of low-income homes each year in Connecticut, it would be decades before all eligible homes could be treated. Weatherization makes only a small dent in the statewide needs of low-income households.

In addition, for some households with very low-incomes, no amount of weatherization will be able to bring their bills low enough to be an affordable energy burden. The energy poverty crisis facing low-income households is not a problem that can be addressed by increasing weatherization funds alone. The home energy burdens faced by low-income households are not simply a function of high energy bills, but instead are a function of the interplay between energy bills and income. While weatherization unquestionably plays an important role in helping to address energy poverty issues, and funding should be maintained if not expanded, weatherization alone would be inadequate to redress the mismatch between household home energy expenses and household resources available to pay those expenses.

Finally, issues such as regulatory protections through processes such as payment plans, extreme weather protections (such as hot and cold weather shutoff moratoriums), the impacts of current efforts to impose miscellaneous fees (such as field collection charges and service connect charges) have been set aside not because they are unimportant, but rather because it is impossible to comprehensively address such issues in this report.<sup>16</sup>

---

<sup>16</sup> Persons interested in such issues can access information through organizations such as the National Consumer Law Center (<http://www.consumerlaw.org>), the National Fuel Funds Network (<http://www.nationalfuel Funds.org>), and Fisher, Sheehan & Colton (<http://www.fsconline.com>).
